

Événement

Événement is a very simple event dispatching library for PHP.

It has the same design goals as Silex and Pimple, to empower the user while staying concise and simple.

It is very strongly inspired by the EventEmitter API found in node.js.

Fetch

The recommended way to install Événement is through composer. By running the following command:

```
$ composer require evenement/événement
```

Usage

Creating an Emitter

```
<?php
$emitter = new Événement\EventEmitter();
```

Adding Listeners

```
<?php
$emitter->on('user.created', function (User $user) use ($logger) {
    $logger->log(sprintf("User '%s' was created.", $user->getLogin()));
});
```

Removing Listeners

```
<?php
$emitter->removeListener('user.created', function (User $user) use ($logger) {
    $logger->log(sprintf("User '%s' was created.", $user->getLogin()));
});
```

Emitting Events

```
<?php
$emitter->emit('user.created', [$user]);
```

Tests

```
$ ./vendor/bin/phpunit
```
