

sebastian/object-reflector

Allows reflection of object properties, including inherited and private as well as protected ones.

Installation

You can add this library as a local, per-project dependency to your project using Composer:

```
composer require sebastian/object-reflector
```

If you only need this library during development, for instance to run your project's test suite, then you should add it as a development-time dependency:

```
composer require --dev sebastian/object-reflector
```
