

CHANGELOG

6.4

- Add early directory pruning to `Finder::filter()`

6.2

- Add `Finder::sortByExtension()` and `Finder::sortBySize()`
- Add `Finder::sortByCaseInsensitiveName()` to sort by name with case insensitive sorting methods

6.0

- Remove `Comparator::setTarget()` and `Comparator::setOperator()`

5.4.0

- Deprecate `Comparator::setTarget()` and `Comparator::setOperator()`
- Add a constructor to `Comparator` that allows setting target and operator
- `Finder`'s iterator has now `Symfony\Component\Finder\SplFileInfo` inner type specified
- Add recursive `.gitignore` files support

5.0.0

- added `$useNaturalSort` argument to `Finder::sortByName()`

4.3.0

- added `Finder::ignoreVCSIgnored()` to ignore files based on rules listed in `.gitignore`

4.2.0

- added `$useNaturalSort` option to `Finder::sortByName()` method
- the `Finder::sortByName()` method will have a new `$useNaturalSort` argument in version 5.0, not defining it is deprecated
- added `Finder::reverseSorting()` to reverse the sorting

4.0.0

- removed `ExceptionInterface`
- removed `Symfony\Component\Finder\Iterator\FilterIterator`

3.4.0

- deprecated `Symfony\Component\Finder\Iterator\FilterIterator`
- added `Finder::hasResults()` method to check if any results were found

3.3.0

- added double-star matching to `Glob::toRegex()`

3.0.0

- removed deprecated classes

2.8.0

- deprecated adapters and related classes

2.5.0

- added support for `GLOB_BRACE` in the paths passed to `Finder::in()`

2.3.0

- added a way to ignore unreadable directories (via `Finder::ignoreUnreadableDirs()`)
- unified the way subfolders that are not executable are handled by always throwing an `AccessDeniedException` exception

2.2.0

- added `Finder::path()` and `Finder::notPath()` methods
- added finder adapters to improve performance on specific platforms
- added support for wildcard characters (glob patterns) in the paths passed to `Finder::in()`

2.1.0

- added `Finder::sortByAccessedTime()`, `Finder::sortByChangedTime()`, and `Finder::sortByModifiedTime()`
- added `Countable` to `Finder`
- added support for an array of directories as an argument to `Finder::exclude()`
- added searching based on the file content via `Finder::contains()` and `Finder::notContains()`
- added support for the `!=` operator in the `Comparator`
- `[BC BREAK]` filter expressions (used for file name and content) are no more considered as regexps but glob patterns when they are enclosed in `'*'` or `'?'`
