

CHANGELOG

7.3

- Add the `AbstractString::pascal()` method

7.2

- Add `TruncateMode` enum to handle more truncate methods
- Add the `AbstractString::kebab()` method

7.1

- Add `localeLower()`, `localeUpper()`, `localeTitle()` methods to `AbstractUnicodeString`

6.2

- Add support for emoji in `AsciiSlugger`

5.4

- Add `trimSuffix()` and `trimPrefix()` methods

5.3

- Made `AsciiSlugger` fallback to parent locale's `symbolsMap`

5.2.0

- added a `FrenchInflector` class

5.1.0

- added the `AbstractString::reverse()` method
- made `AbstractString::width()` follow POSIX.1-2001
- added `LazyString` which provides memoizing stringable objects
- The component is not marked as `@experimental` anymore
- added the `s()` helper method to get either an `UnicodeString` or `ByteString` instance, depending of the input string UTF-8 compliancy
- added `$cut` parameter to `Symfony\Component\String\AbstractString::truncate()`
- added `AbstractString::containsAny()`
- allow passing a string of custom characters to `ByteString::fromRandom()`

5.0.0

- added the component as experimental
