

Tokenizer

A small library for converting tokenized PHP source code into XML.

Installation

You can add this library as a local, per-project dependency to your project using Composer:

```
composer require theseer/tokenizer
```

If you only need this library during development, for instance to run your project's test suite, then you should add it as a development-time dependency:

```
composer require --dev theseer/tokenizer
```

Usage examples

```
$tokenizer = new TheSeer\Tokenizer\Tokenizer();
$tokens = $tokenizer->parse(file_get_contents(__DIR__ . '/src/XMLSerializer.php'));

$serializer = new TheSeer\Tokenizer\XMLSerializer();
$xml = $serializer->toXML($tokens);

echo $xml;
```

The generated XML structure looks something like this:

```
<?xml version="1.0"?>
<source xmlns="https://github.com/theseer/tokenizer">
  <line no="1">
    <token name="T_OPEN_TAG">&lt;?php </token>
    <token name="T_DECLARE">declare</token>
    <token name="T_OPEN_BRACKET">(</token>
    <token name="T_STRING">strict_types</token>
    <token name="T_WHITESPACE"> </token>
    <token name="T_EQUAL">=</token>
    <token name="T_WHITESPACE"> </token>
    <token name="T_LNUMBER">1</token>
    <token name="T_CLOSE_BRACKET">)</token>
    <token name="T_SEMICOLON">;</token>
  </line>
</source>
```
