

## Change Log

All notable changes to this project will be documented in this file. This project adheres to Semantic Versioning.

### **3.4.3 2024-09-19**

- Fixed some type annotations

### **3.4.2 2024-07-12**

- Fixed PHP 5.3 syntax error

### **3.4.1 2024-07-12**

- Fixed normalizeStability's return type to enforce valid stabilities

### **3.4.0 2023-08-31**

- Support larger major version numbers (#149)

### **3.3.2 2022-04-01**

- Fixed handling of non-string values (#134)

### **3.3.1 2022-03-16**

- Fixed possible cache key clash in the CompilingMatcher memoization (#132)

### **3.3.0 2022-03-15**

- Improved performance of CompilingMatcher by memoizing more (#131)
- Added CompilingMatcher::clear to clear all memoization caches

### **3.2.9 2022-02-04**

- Revert #129 (Fixed MultiConstraint with MatchAllConstraint) which caused regressions

### **3.2.8 2022-02-04**

- Updates to latest phpstan / CI by @Seldaek in <https://github.com/composer/semver/pull/130>
- Fixed MultiConstraint with MatchAllConstraint by @Toflar in <https://github.com/composer/semver/pull/129>

### **3.2.7 2022-01-04**

- Fixed: typo in type definition of Intervals class causing issues with Psalm scanning vendors

### **3.2.6 2021-10-25**

- Fixed: type improvements to parseStability

### **3.2.5 2021-05-24**

- Fixed: issue comparing disjunctive MultiConstraints to conjunctive ones (#127)
- Fixed: added complete type information using phpstan annotations

### **3.2.4 2020-11-13**

- Fixed: code clean-up

### **3.2.3 2020-11-12**

- Fixed: constraints in the form of `X || Y, >=Y.1` and other such complex constructs were in some cases being optimized into a more restrictive constraint

### **3.2.2 2020-10-14**

- Fixed: internal code cleanups

### **3.2.1 2020-09-27**

- Fixed: accidental validation of broken constraints combining `^/~` and wildcards, and `-dev` suffix allowing weird cases
- Fixed: normalization of `beta0` and such which was dropping the `0`

### **3.2.0 2020-09-09**

- Added: support for `x || @dev`, not very useful but seen in the wild and failed to validate with 1.5.2/1.6.0
- Added: support for `foobar-dev` being equal to `dev-foobar`, `dev-foobar` is the official way to write it but we need to support the other for BC and convenience

### **3.1.0 2020-09-08**

- Added: support for constraints like `^2.x-dev` and `~2.x-dev`, not very useful but seen in the wild and failed to validate with 3.0.1
- Fixed: invalid aliases will no longer throw, unless explicitly validated by Composer in the root package

### 3.0.1 2020-09-08

- Fixed: handling of some invalid -dev versions which were seen as valid

### 3.0.0 2020-05-26

- Break: Renamed `EmptyConstraint`, replace it with `MatchAllConstraint`
- Break: Unlikely to affect anyone but strictly speaking a breaking change, `*.*` and such variants will not match all `dev-*` versions anymore, only `*` does
- Break: `ConstraintInterface` is now considered internal/private and not meant to be implemented by third parties anymore
- Added `Intervals` class to check if a constraint is a subsets of another one, and allow compacting complex `MultiConstraints` into simpler ones
- Added `CompilingMatcher` class to speed up constraint matching against simple `Constraint` instances
- Added `MatchAllConstraint` and `MatchNoneConstraint` which match everything and nothing
- Added more advanced optimization of contiguous constraints inside `MultiConstraint`
- Added tentative support for PHP 8
- Fixed `ConstraintInterface::matches` to be commutative in all cases

### 2.0.0 2020-04-21

- Break: `dev-master`, `dev-trunk` and `dev-default` now normalize to `dev-master`, `dev-trunk` and `dev-default` instead of `9999999-dev` in 1.x
- Break: Removed the deprecated `AbstractConstraint`
- Added `getUpperBound` and `getLowerBound` to `ConstraintInterface`. They return `Composer\Semver\Constraint\Bound` instances
- Added `MultiConstraint::create` to create the most-optimal form of `ConstraintInterface` from an array of constraint strings

### 1.7.2 2020-12-03

- Fixed: Allow installing on php 8

### 1.7.1 2020-09-27

- Fixed: accidental validation of broken constraints combining `^/~` and wildcards, and -dev suffix allowing weird cases
- Fixed: normalization of `beta0` and such which was dropping the 0

### 1.7.0 2020-09-09

- Added: support for `x || @dev`, not very useful but seen in the wild and failed to validate with 1.5.2/1.6.0

- Added: support for `foobar-dev` being equal to `dev-foobar`, `dev-foobar` is the official way to write it but we need to support the other for BC and convenience

#### **1.6.0 2020-09-08**

- Added: support for constraints like `^2.x-dev` and `~2.x-dev`, not very useful but seen in the wild and failed to validate with 1.5.2
- Fixed: invalid aliases will no longer throw, unless explicitly validated by Composer in the root package

#### **1.5.2 2020-09-08**

- Fixed: handling of some invalid `-dev` versions which were seen as valid
- Fixed: some doctypes

#### **1.5.1 2020-01-13**

- Fixed: Parsing of aliased version was not validating the alias to be a valid version

#### **1.5.0 2019-03-19**

- Added: some support for date versions (e.g. 201903) in `~` operator
- Fixed: support for stabilities in `~` operator was inconsistent

#### **1.4.2 2016-08-30**

- Fixed: collapsing of complex constraints lead to buggy constraints

#### **1.4.1 2016-06-02**

- Changed: branch-like requirements no longer strip build metadata - composer/semver#38.

#### **1.4.0 2016-03-30**

- Added: getters on `MultiConstraint` - composer/semver#35.

#### **1.3.0 2016-02-25**

- Fixed: stability parsing - composer/composer#1234.
- Changed: collapse contiguous constraints when possible.

#### **1.2.0 2015-11-10**

- Changed: allow multiple numerical identifiers in ‘pre-release’ version part.
- Changed: add more ‘v’ prefix support.

### 1.1.0 2015-11-03

- Changed: dropped redundant `test` namespace.
- Changed: minor adjustment in datetime parsing normalization.
- Changed: `ConstraintInterface` relaxed, `setPrettyString` is not required anymore.
- Changed: `AbstractConstraint` marked deprecated, will be removed in 2.0.
- Changed: `Constraint` is now extensible.

### 1.0.0 2015-09-21

- Break: `VersionConstraint` renamed to `Constraint`.
- Break: `SpecificConstraint` renamed to `AbstractConstraint`.
- Break: `LinkConstraintInterface` renamed to `ConstraintInterface`.
- Break: `VersionParser::parseNameVersionPairs` was removed.
- Changed: `VersionParser::parseConstraints` allows (but ignores) build metadata now.
- Changed: `VersionParser::parseConstraints` allows (but ignores) pre-fixing numeric versions with a 'v' now.
- Changed: Fixed namespace(s) of test files.
- Changed: `Comparator::compare` no longer throws `InvalidArgumentException`.
- Changed: `Constraint` now throws `InvalidArgumentException`.

### 0.1.0 2015-07-23

- Added: `Composer\Semver\Comparator`, various methods to compare versions.
- Added: various documents such as README.md, LICENSE, etc.
- Added: configuration files for Git, Travis, php-cs-fixer, phpunit.
- Break: the following namespaces were renamed:
  - Namespace: `Composer\Package\Version` -> `Composer\Semver`
  - Namespace: `Composer\Package\LinkConstraint` -> `Composer\Semver\Constraint`
  - Namespace: `Composer\Test\Package\Version` -> `Composer\Test\Semver`
  - Namespace: `Composer\Test\Package\LinkConstraint` -> `Composer\Test\Semver\Constraint`
- Changed: code style using php-cs-fixer.
