

Changes in PHPUnit 10.5

All notable changes of the PHPUnit 10.5 release series are documented in this file using the Keep a CHANGELOG principles.

10.5.36 - 2024-10-08

Changed

- #5957: Skip data provider build when requirements are not satisfied
- #5969: Check for requirements before creating a separate process
- Updated regular expressions used by `StringMatchesFormatDescription` constraint to be consistent with PHP's `run-tests.php`

Fixed

- #5965: `PHPUnit\Framework\Exception` does not handle string error codes (`PDOException` with error code `'HY000'`, for example)

10.5.35 - 2024-09-19

Changed

- #5956: Deprecation of the `E_STRICT` constant in PHP 8.4

Fixed

- #5950: TestDox text should not be `trim()`med when it contains `$` character
- The attribute parser will no longer try to instantiate attribute classes that do not exist

10.5.34 - 2024-09-13

Fixed

- #5931: Reverted addition of `name` property on `<testsuites>` element in JUnit XML logfile
- #5946: `Callback` throws a `TypeError` when checking a `callable` has variadic parameters

10.5.33 - 2024-09-09

Fixed

- #4584: `assertJsonStringEqualsJsonString()` considers objects with sequential numeric keys equal to be arrays
- #4625: Generator yielding keys that are neither integer or string leads to hard-to-understand error message when used as data provider
- #4674: JSON assertions should treat objects as unordered

- #5891: `Callback` constraint does not handle variadic arguments correctly when used for mock object expectations
- #5929: TestDox output containing `$` at the beginning gets truncated when used with a data provider

10.5.32 - 2024-09-04

Added

- #5937: `failOnPhpunitDeprecation` attribute on the `<phpunit>` element of the XML configuration file and `--fail-on-phpunit-deprecation` CLI option for controlling whether PHPUnit deprecations should be considered when determining the test runner's shell exit code (default: do not consider)
- `displayDetailsOnPhpunitDeprecations` attribute on the `<phpunit>` element of the XML configuration file and `--display-phpunit-deprecations` CLI option for controlling whether details on PHPUnit deprecations should be displayed (default: do not display)

Changed

- #5937: PHPUnit deprecations will, by default, no longer affect the test runner's shell exit code. This can optionally be turned back on using the `--fail-on-phpunit-deprecation` CLI option or the `failOnPhpunitDeprecation="true"` attribute on the `<phpunit>` element of the XML configuration file.
- Details for PHPUnit deprecations will, by default, no longer be displayed. This can optionally be turned back on using the `--display-phpunit-deprecations` CLI option or the `displayDetailsOnPhpunitDeprecations` attribute on the `<phpunit>` element of the XML configuration file.

10.5.31 - 2024-09-03

Changed

- #5931: `name` property on `<testsuites>` element in JUnit XML logfile
- Removed `.phpstorm.meta.php` file as methods such as `TestCase::createStub()` use generics / template types for their return types and PhpStorm, for example, uses that information

Fixed

- #5884: TestDox printer does not consider that issues can be suppressed by attribute, baseline, source location, or `@` operator

10.5.30 - 2024-08-13

Changed

- Improved error message when stubbed method is called more often than return values were configured for it

10.5.29 - 2024-07-30

Fixed

- #5887: Issue baseline generator does not correctly handle ignoring suppressed issues
- #5908: `--list-tests` and `--list-tests-xml` CLI options do not report error when data provider method throws exception

10.5.28 - 2024-07-18

Fixed

- #5898: `Test\Passed` event is not emitted for PHPT tests
- `--coverage-filter` CLI option could not be used multiple times

10.5.27 - 2024-07-10

Changed

- Updated dependencies (so that users that install using Composer's `--prefer-lowest` CLI option also get recent versions)

Fixed

- #5892: Errors during write of `phpunit.xml` are not handled correctly when `--generate-configuration` is used

10.5.26 - 2024-07-08

Added

- `--only-summary-for-coverage-text` CLI option to reduce the code coverage report in text format to a summary
- `--show-uncovered-for-coverage-text` CLI option to expand the code coverage report in text format to include a list of uncovered files

10.5.25 - 2024-07-03

Changed

- Updated dependencies for PHAR distribution

10.5.24 - 2024-06-20

Changed

- #5877: Use `array_pop()` instead of `array_shift()` for processing `Test` objects in `TestSuite::run()` and optimize `TestSuite::isEmpty()`

10.5.23 - 2024-06-20

Changed

- #5875: Also destruct `TestCase` objects early that use a data provider

10.5.22 - 2024-06-19

Changed

- #5871: Do not collect unnecessary information using `debug_backtrace()`

10.5.21 - 2024-06-15

Changed

- #5861: Destroy `TestCase` object after its test was run

10.5.20 - 2024-04-24

- #5771: JUnit XML logger may crash when test that is run in separate process exits unexpectedly
- #5819: Duplicate keys from different data providers are not handled properly

10.5.19 - 2024-04-17

Fixed

- #5818: Calling `method()` on a test stub created using `createStubForIntersectionOfInterfaces()` throws an unexpected exception

10.5.18 - 2024-04-14

Deprecated

- #5812: Support for string array keys in data sets returned by data provider methods that do not match the parameter names of the test method(s) that use(s) them

Fixed

- #5795: Using `@testWith` annotation may generate PHP Warning: Uninitialized string offset 0

10.5.17 - 2024-04-05

Changed

- The namespaces of dependencies are now prefixed with `PHPUnitPHAR` instead of just `PHPUnit` for the PHAR distribution of `PHPUnit`

10.5.16 - 2024-03-28

Changed

- #5766: Do not use a shell in `proc_open()` if not really needed
- #5772: Cleanup process handling after dropping temp-file handling

Fixed

- #5570: Windows does not support exclusive locks on stdout

10.5.15 - 2024-03-22

Fixed

- #5765: Be more forgiving with error handlers that do not respect error suppression

10.5.14 - 2024-03-21

Changed

- #5747: Cache result of `Groups::groups()`
- #5748: Improve performance of `NamePrettifier::prettifyTestMethodName()`
- #5750: Micro-optimize `NamePrettifier::prettifyTestMethodName()` once again

Fixed

- #5760: TestDox printer does not display details about exceptions raised in before-test methods

10.5.13 - 2024-03-12

Changed

- #5727: Prevent duplicate call of `NamePrettifier::prettifyTestMethodName()`
- #5739: Micro-optimize `NamePrettifier::prettifyTestMethodName()`

- #5740: Micro-optimize `TestRunner::runTestWithTimeout()`
- #5741: Save call to `Telemetry\System::snapshot()`
- #5742: Prevent file IO when not strictly necessary
- #5743: Prevent unnecessary `ExecutionOrderDependency::getTarget()` call
- #5744: Simplify `NamePrettifier::prettifyTestMethodName()`

Fixed

- #5351: Incorrect code coverage metadata does not prevent code coverage data from being collected
- #5746: Using `-d` CLI option multiple times triggers warning

10.5.12 - 2024-03-09

Fixed

- #5652: `HRTIME::duration()` throws `InvalidArgumentException`

10.5.11 - 2024-02-25

Fixed

- #5704: No warning when CLI options are used multiple times
- #5707: `--fail-on-empty-test-suite` CLI option is not documented in `--help` output
- No warning when the `#[CoversClass]` and `#[UsesClass]` attributes are used with the name of an interface
- Resource usage information is printed when the `--debug` CLI option is used

10.5.10 - 2024-02-04

Changed

- Improve output of `--check-version` CLI option
- Improve description of `--check-version` CLI option

Fixed

- #5692: `--log-events-text` and `--log-events-verbose-text` require the destination file to exist

10.5.9 - 2024-01-22

Changed

- Show help for `--manifest`, `--sbom`, and `--composer-lock` when the PHAR is used

Fixed

- #5676: PHPUnit's test runner overwrites custom error handler registered using `set_error_handler()` in bootstrap script

10.5.8 - 2024-01-19

Fixed

- #5673: Confusing error message when migration of a configuration is requested that does not need to be migrated

10.5.7 - 2024-01-14

Fixed

- #5662: PHPUnit errors out on startup when the `ctype` extension is not loaded but a polyfill for it was installed

10.5.6 - 2024-01-13

Added

- Added the `--debug` CLI option as an alias for `--no-output --log-events-text php://stdout`

Fixed

- #5455: `willReturnCallback()` does not pass unknown named variadic arguments to callback
- #5488: Details about tests that are considered risky are not displayed when the TestDox result printer is used
- #5516: Assertions that use the `LogicalNot` constraint (`assertNotEquals()`, `assertStringNotContainsString()`, ...) can generate confusing failure messages
- #5518: Details about deprecations, notices, and warnings are not displayed when the TestDox result printer is used
- #5574: Wrong backtrace line is reported
- #5633: `--log-events-text` and `--log-events-verbose-text` CLI options do not handle absolute and relative paths
- #5634: Exceptions in the destructor of a test double are ignored
- #5641: The `TestSuite` value object returned by `TestSuite\Filtered::testSuite()` contains all tests instead of only the filtered tests

10.5.5 - 2023-12-27

Fixed

- #5619: Reverted change introduced in PHPUnit 10.5.4 that broke back-

ward compatibility

10.5.4 - 2023-12-27

Fixed

- #5592: Error Handler prevents `error_get_last()` usage in tests
- #5592: `E_USER_ERROR` does not abort test execution
- #5612: Empty `<coverage>` element in XML configuration after migrating configuration
- #5616: Values from data provider are not shown for failed test
- #5619: Check and restore error/exception global handlers
- #5621: Name of data set is missing from TeamCity output

10.5.3 - 2023-12-13

Changed

- Make PHAR build reproducible (the only remaining differences were in the timestamps for the files in the PHAR)

Deprecated

- `Test\AssertionFailed` and `Test\AssertionSucceeded` events
- `PHPUnit\Runner\Extension\Facade::requireExportOfObjects()` and `PHPUnit\Runner\Extension\Facade::requiresExportOfObjects()`
- `registerMockObjectsFromTestArgumentsRecursively` attribute on the `<phpunit>` element of the XML configuration file
- `PHPUnit\TextUI\Configuration\Configuration::registerMockObjectsFromTestArgumentsRecursively`

Fixed

- #5614: Infinite recursion when data provider provides recursive array

10.5.2 - 2023-12-05

Fixed

- #5561: JUnit XML logger does not handle assertion failures in before-test methods
- #5567: Infinite recursion when recursive / self-referencing arrays are checked whether they contain only scalar values

10.5.1 - 2023-12-01

Fixed

- #5593: Return Value Generator fails to correctly create test stub for method with `static` return type declaration when used recursively

- #5596: PHPUnit\Framework\TestCase has @internal annotation in PHAR

10.5.0 - 2023-12-01

Added

- #5532: #[IgnoreDeprecations] attribute to ignore E_(USER_)DEPRECATED issues on test class and test method level
- #5551: Support for omitting parameter default values for willReturnMap()
- #5577: --composer-lock CLI option for PHAR binary that displays the composer.lock used to build the PHAR

Changed

- MockBuilder::disableAutoReturnValueGeneration() and MockBuilder::enableAutoReturnValueGeneration() are no longer deprecated

Fixed

- #5563: createMockForIntersectionOfInterfaces() does not automatically register mock object for expectation verification
