

PHPUnit

PHPUnit is a programmer-oriented testing framework for PHP. It is an instance of the xUnit architecture for unit testing frameworks.

Installation

We distribute a PHP Archive (PHAR) that has all required (as well as some optional) dependencies of PHPUnit bundled in a single file:

```
$ wget https://phar.phpunit.de/phpunit-X.Y.phar
```

```
$ php phpunit-X.Y.phar --version
```

Please replace **X.Y** with the version of PHPUnit you are interested in.

Alternatively, you may use Composer to download and install PHPUnit as well as its dependencies. Please refer to the documentation for details on how to install PHPUnit.

Contribute

Please refer to CONTRIBUTING.md for information on how to contribute to PHPUnit and its related projects.

List of Contributors

Thanks to everyone who has contributed to PHPUnit! You can find a detailed list of contributors on every PHPUnit related package on GitHub. This list shows only the major components:

- PHPUnit
- php-code-coverage

A very special thanks to everyone who has contributed to the documentation.
