
Collision was created by, and is maintained by **Nuno Maduro**, and is a package designed to give you beautiful error reporting when interacting with your app through the command line.

- It's included on **Laravel**, the most popular free, open-source PHP framework in the world.
- Built on top of the **Whoops** error handler.
- Supports Laravel, Symfony, PHPUnit, and many other frameworks.

Installation & Usage

Requires PHP 8.2+

Require Collision using Composer:

```
composer require nunomaduro/collision --dev
```

Version Compatibility

Laravel	Collision	PHPUnit	Pest
6.x	3.x		
7.x	4.x		
8.x	5.x		
9.x	6.x		
10.x	6.x	9.x	1.x
10.x	7.x	10.x	2.x
11.x	8.x	10.x	2.x
11.x	8.x	11.x	3.x

As an example, here is how to require Collision on Laravel 8.x:

```
composer require nunomaduro/collision:^5.0 --dev
```

No adapter

You need to register the handler in your code:

```
(new \NunoMaduro\Collision\Provider)->register();
```

Contributing

Thank you for considering to contribute to Collision. All the contribution guidelines are mentioned here.

You can have a look at the **CHANGELOG** for constant updates & detailed information about the changes. You can also follow the twitter account for latest announcements or just come say hi!: @enunomaduro
