

CHANGELOG

v2.18.0

- Line numbers are now clickable.

v2.17.0

- Support cursor IDE.

v2.16.0

- Support PHP 8.4.
- Drop support for PHP older than 7.1.

v2.15.4

- Improve link color in comments.

v2.15.3

- Improve performance of the syntax highlighting (#758).

v2.15.2

- Fixed missing code highlight, which additionally led to issue with switching tabs, between application and all frames (#747).

v2.15.1

- Fixed bug with PrettyPageHandler “*Calling `getFrameFilters` method on null*” (#751).

v2.15.0

- Add addFrameFilter (#749)

v2.14.6

- Upgraded prismJS to version 1.29.0 due to security issue (#741).

v2.14.5

- Allow `ArrayAccess` on super globals.

v2.14.4

- Fix PHP 5.5 support.
- Allow to use psr/log 2 or 3.

v2.14.3

- Support PHP 8.1.

v2.14.1

- Fix syntax highlighting scrolling too far.
- Improve the way we detect xdebug linkformat.

v2.14.0

- Switched syntax highlighting to Prism.js.

Avoids licensing issues with prettify, and uses a maintained, modern project.

v2.13.0

- Add Netbeans editor.

v2.12.1

- Avoid redirecting away from an error.

v2.12.0

- Hide non-string values in super globals when requested.

v2.11.0

- Customize exit code.

v2.10.0

- Better chaining on handler classes.

v2.9.2

- Fix copy button styles.

v2.9.1

- Fix xdebug function crash on PHP 8.

v2.9.0

- `JsonResponseHandler` includes the exception code.

v2.8.0

- Support PHP 8.

v2.7.3

- `PrettyPageHandler` functionality to hide superglobal keys has a clearer name (`hideSuperglobalKey`).

v2.7.2

- `PrettyPageHandler` now accepts custom js files.
- `PrettyPageHandler` and `templateHelper` is now accessible through inheritance.

v2.7.1

- Fix a PHP warning in some cases with anonymous classes.

v2.7.0

- Added `removeFirstHandler` and `removeLastHandler`.

v2.6.0

- Fix 2.4.0 `pushHandler` changing the order of handlers.

v2.5.1

- Fix error messaging in a rare case.

v2.5.0

- Automatically configure xdebug if available.

v2.4.1

- Try harder to close all output buffers.

v2.4.0

- Allow to prepend and append handlers.

v2.3.2

- Various fixes from the community.

v2.3.1

- Prevent exception in Whoops when caught exception frame is not related to real file.

v2.3.0

- Show previous exception messages.

v2.2.0

- Support PHP 7.2.

v2.1.0

- Add a `SystemFacade` to allow clients to override Whoops behavior.
- Show frame arguments in `PrettyPageHandler`.
- Highlight the line with the error.
- Add icons to search on Google and Stack Overflow.

v2.0.0

Backwards compatibility breaking changes:

- `Run` class is now `final`. If you inherited from `Run`, please now instead use a custom `SystemFacade` injected into the `Run` constructor, or contribute your changes to our core.
- PHP < 5.5 support dropped.
