

MCP Filesystem Access Setup

Current Issue

MCP filesystem server only allows access to: - `/Users/s-a-c/Desktop` - `/Users/s-a-c/Downloads`

Project location: `/Users/s-a-c/Herd/chinook` (NOT ALLOWED)

Solution

Add project directory to MCP allowed directories:

Method 1: PHPStorm Settings

1. Open PHPStorm Settings (Cmd+,)
2. Navigate to Tools → MCP
3. Add allowed directory: `/Users/s-a-c/Herd/chinook`
4. Apply and restart PHPStorm

Method 2: MCP Config File

Location: `~/.config/mcp/config.json`

```
{  
  "filesystem": {  
    "allowed_directories": [  
      "/Users/s-a-c/Desktop",  
      "/Users/s-a-c/Downloads",  
      "/Users/s-a-c/Herd/chinook"  
    ]  
  }  
}
```

Method 3: Environment Variable

```
export MCP_ALLOWED_DIRS="/Users/s-a-c/Desktop:/Users/s-a-c/Downloads:/Users/s-a-c/Herd/chinook"
```

Next Steps

1. Configure using one of the methods above
2. Restart MCP server/PHPStorm
3. Test filesystem access
